PROJECTS

Lung Cancer Detection.

Currently working in a team of 5 members .Lung Cancer Detection is a machine learning based project in which we used to diagnose whether person is suffering from lung cancer or not.

Student Management System.

Build a project that manages student record and had quantified success using python, tkinter and MySQL. This project's insert new records of student and also update or delete the records.

Random Story Generator.

The random story generator project aims to generate random stories every time user executes the code. We will choose phrases to build sentences and hence stories using Python.
